

Riverbend Food Alliance — Automated Volunteer Confirmation Flow

Replaces manual Google Form → Airtable entry → hand-texts (est. 6 hrs/week, Priya)

END-TO-END ARCHITECTURE

Existing Google tools

Airtable (source of truth)

Claude + MCP layer

SMS via Twilio

Slack notifications

Scheduled triggers (cron)

MCP SERVERS REQUIRED

MCP Server	Used By	Operations	SaaS Status
Airtable MCP	All 4 Claude bots	Read/write volunteer roster; weekly rollup query	Existing — Airtable API key from Marcus
Twilio SMS MCP	Confirmation, Reminder, Cancellation bots	Send outbound SMS; receive CANCEL webhooks	New SaaS — requires Diane sign-off ~\$0.0075/msg · est. <\$20/yr at current volume
Slack MCP	Cancellation + Report bots	Post to #volunteers channel	Existing — Slack already in use

DESIGN NOTES

- **Google Form stays as the intake surface** — no change for volunteers signing up; Apps Script bridges it to Airtable automatically, replacing Priya's manual entry step.
- **Airtable remains the single source of truth** for Name, Phone, Route, Shift, and Status — not the Sheet. The Sheet becomes a transient staging layer only.
- **Claude's role is generation + routing**, not storage. It personalizes confirmation and reminder message text (e.g., includes correct shift time, location, cancellation instruction) and decides when to alert Slack. MCP servers handle all I/O.
- **No-show tracking** becomes automatic: Airtable records who confirmed, who cancelled via SMS, and who appeared (future: Priya marks attendance). Monday report computes the no-show rate formally for the first time.
- **Weather cancellations** (currently decided by Marcus by 6 AM): Claude can send a bulk cancellation SMS to the day's roster the moment Marcus posts to #warehouse-ops — no additional manual step. This replaces the current group-text and the wishlist cancellation banner.
- **Age constraint enforcement**: mobile pantry shifts (18+) are flagged in the signup form itself — see updated index.html.
